SMART CONTRACT SECURITY AUDIT

UNICOIN TOKEN CONTRACTS

SMART CONTRACT AUDIT | TEAM KYC | PROJECT EVALUATION

RELENTLESSLY SECURING THE PUBLIC BLOCKCHAIN | MADE IN CANADA

Summary

Auditing Firm	InterFi Network
Architecture	InterFi "Echelon" Auditing Standard
Smart Contract Audit Approved By	Chris | Blockchain Specialist at InterFi Network
Project Overview Approved BY	Albert | Project Specialist at InterFi Network
Platform	Solidity
Audit Check (Mandatory)	Static, Software, Auto Intelligent & Manual Analysis
Project Check (Optional)	KYC Analysis
Consultation Request Date	October 07, 2021
Report Date	October 11, 2021

Audit Summary

InterFi team has performed a line-by-line manual analysis and automated review of the smart contract. The smart contract was analyzed mainly for common smart contract vulnerabilities, exploits, and manipulation hacks. According to the smart contract audit:

- **UNICOIN'S token smart contract source codes has LOW RISK SEVERITY.**
- **UNICOIN has successfully PASSED the smart contract audit.**
- **UNICOIN'S vesting utility contracts have successfully PASSED the smart contract audit. Check token audit here**
- **UNICOIN has successfully PASSED the owner's KYC verification. Check KYC here**

Table Of Contents

Project Overview

InterFi was consulted by UNICOIN on October 07, 2021, to conduct a smart contract security audit of their token source code.

The UNICOIN utility token will facilitate fast, hassle-free and cost-effective cross-network transactions within a single wallet or application without the need for constant network switching. Initially allowing the transfer of UNCOIN between the Binance Smart Chain, the Ethereum (ETH), POLYGON (MATIC) and Bitcoin network.

UNICOIN will be interoperable with other assets and integrate with other blockchains such as SOLANA and Tron in our second phase of development. The UNICOIN development team is focused on creating the ultimate user experience and promoting blockchain interoperability.

UNICOIN ensures that users can quickly and cost-effectively move assets from one network to another with just a few clicks in one APP.

Project	UNICOIN
Blockchain	Not Deployed (Binance & Ethereum Smart Chain Planned)

Audit Scope & Methodology

The scope of this report is to audit the smart contract source code of UNICOIN Token. The source code can be viewed in its entirety on

https://github.com/interfinetwork/audited-codes/blob/main/unicointoken.sol

InterFi has scanned the contract and reviewed the project for common vulnerabilities, exploits, hacks, and back-doors. Below is the list of commonly known smart contract vulnerabilities, exploits, and hacks:

Category	
Smart Contract Vulnerabilities	❖ Re-entrancy (RE) ❖ Unhandled Exceptions (UE) ❖ Transaction Order Dependency (TO) ❖ Integer Overflow (IO) ❖ Unrestricted Action (UA) ❖ Ownership Takeover ❖ Gas Limit and Loops
Source Code Review	❖ Deployment Consistency ❖ Repository Consistency ❖ Data Consistency ❖ Token Supply Manipulation
Functional Assessment	❖ Access Control and Authorization ❖ Operations Trail and Event Generation ❖ Assets Manipulation ❖ Liquidity Access

InterFi's Echelon Audit Standard

The aim of InterFi's "Echelon" standard is to analyze the smart contract and identify the vulnerabilities and the hacks in the smart contract. Mentioned are the steps used by ECHELON-1 to assess the smart contract:

1. Solidity smart contract source code reviewal:
   - ❖ Review of the specifications, sources, and instructions provided to InterFi to make sure we understand the size, scope, and functionality of the smart contract.
   - ❖ Manual review of code, which is the process of reading source code line-by-line to identify potential vulnerabilities.
2. Static, Manual, and Automated AI analysis:
   - ❖ Test coverage analysis, which is the process of determining whether the test cases are covering the code and how much code is exercised when we run those test cases.
   - ❖ Symbolic execution, which is analyzing a program to determine what inputs cause each part of a program to execute.
3. Best practices review, which is a review of the smart contracts to improve efficiency, effectiveness, clarify, maintainability, security, and control based on the established industry and academic practices, recommendations, and research.
4. Specific, itemized, actionable recommendations to help you take steps to secure your smart contracts

Automated 3P frameworks used to assess the smart contract vulnerabilities

- ❖ Slither
- ❖ Consensys MythX
- ❖ Consensys Surya
- ❖ Open Zeppelin Code Analyzer
- ❖ Solidity Code Complier

InterFi's Risk Classification

Smart contracts are generally designed to manipulate and hold funds denominated in ETH/BNB. This makes them very tempting attack targets, as a successful attack may allow the attacker to directly steal funds from the contract. Below are the typical risk levels of a smart contract:

Vulnerable: A contract is vulnerable if it has been flagged by a static analysis tool as such. As we will see later, this means that some contracts may be vulnerable because of a false positive.

Exploitable: A contract is exploitable if it is vulnerable and the vulnerability could be exploited by an external attacker. For example, if the "vulnerability" flagged by a tool is in a function that requires to own the contract, it would be vulnerable but not exploitable.

Exploited: A contract is exploited if it received a transaction on the main network which triggered one of its vulnerabilities. Therefore, a contract can be vulnerable or even exploitable without having been exploited.

Risk severity	Meaning
! Critical	This level of vulnerability could be exploited easily and can lead to asset loss, data loss, asset manipulation, or data manipulation. They should be fixed right away.
! High	These vulnerabilities are hard to exploit but very important to fix, they carry an elevated risk of smart contract manipulation, which can lead to critical risk severity
! Medium	These vulnerabilities are should be fixed, as they carry an inherent risk of future exploits, and hacks that may or may not impact the smart contract execution.
! Low	These vulnerabilities can be ignored. They are code style violations, and informational statements in the code. They may not affect the smart contract execution

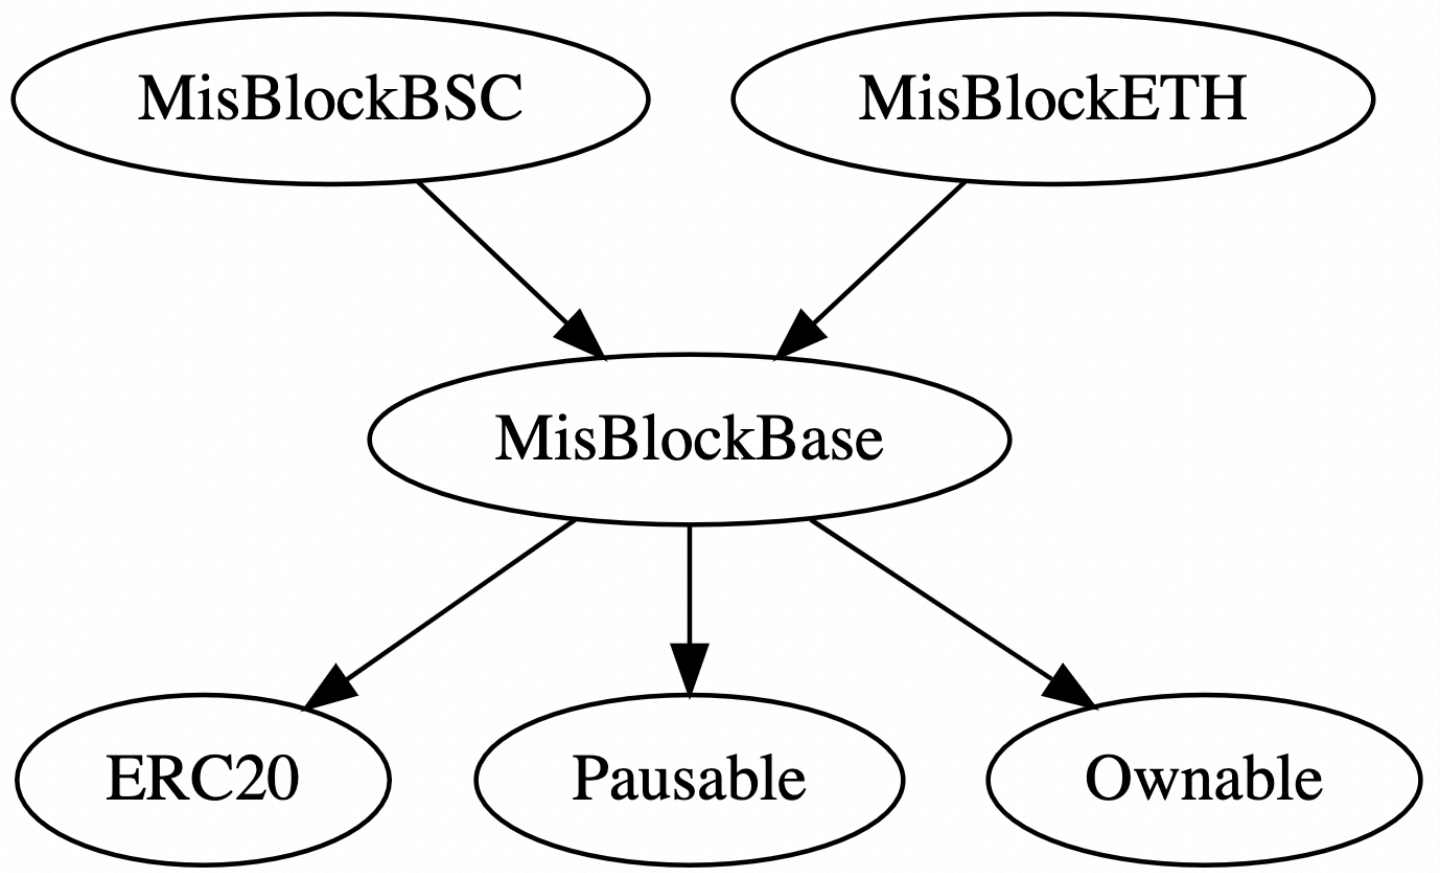
Inheritance Graph



Smart Contract – Manual Analysis

Function	Description	Tested	Verdict
TotalSupply	provides information about the total token supply	Yes	**Passed**
BalanceOf	provides account balance of the owner's account	Yes	**Passed**
Transfer	executes transfers of a specified number of tokens to a specified address	Yes	**Passed**
TransferFrom	executes transfers of a specified number of tokens from a specified address	Yes	**Passed**
Approve	allow a spender to withdraw a set number of tokens from a specified account	Yes	**Passed**
Allowance	returns a set number of tokens from a spender to the owner	Yes	**Passed**
burn	executes transfers of a specified number of tokens to a burn address	NA	NA

Verified

Active smart contract owner privileges constitute an elevated impact to smart contract's safety and security.

- Owner can mint tokens at token launch.
- Owner can pause the smart contract.
- Owner can-not lock or burn user assets.

At the time of the audit, the token contract is not deployed on any blockchain, the contract can be modified/altered before the deployment.

Important Information

UNICOIN Token smart contract utilizes the “SafeMath” to prevent known vulnerabilities.

```
ontract MisBlockBase is ERC20, Pausable, Ownable {
    using SafeMath for uint256;
    using Address for address;

    mapping (address => uint256) private _rOwned;
    mapping (address => uint256) private _tOwned;
```

UNICOIN smart contract has low severity issues which may not create any functional vulnerability.

Auditor's Verdict

InterFi team has performed a line-by-line manual analysis and automated review of the smart contract. The smart contract was analyzed mainly for common smart contract vulnerabilities, exploits, and manipulation hacks.

UNICOIN'S token smart contract source codes has LOW RISK SEVERITY.

UNICOIN has successfully PASSED the smart contract audit.

UNICOIN'S vesting utility contracts have successfully PASSED the smart contract audit. Check token audit here

UNICOIN has successfully PASSED the owner's KYC verification. Check KYC here

General Note:

- Be aware that active smart contract owner privileges constitute an elevated impact on smart contract safety and security.
- At the time of the audit, the token contract is not deployed on any blockchain, the contract can be modified/altered before the deployment.
- The project's liquidity pair isn't checked and verified due to out of scope.
- The project website is not checked due to out of scope. The website hasn't been reviewed for SSL and lighthouse reports.

Important Disclaimer

InterFi Network provides contract auditing and project verification services for blockchain projects. The purpose of the audit is to analyze the on-chain smart contract source code and to provide a basic overview of the project. **This report should not be transmitted, disclosed, referred to, or relied upon by any person for any purpose without InterFi's prior written consent.**

InterFi provides the easy-to-understand assessment of the project, and the smart contract (otherwise known as the source code). The audit makes no statements or warranties on the security of the code. It also cannot be considered as enough assessment regarding the utility and safety of the code, bug-free status, or any other statements of the contract. While we have used all the data at our disposal to provide the transparent analysis, it is important to note that you should not rely on this report only — we recommend proceeding with several independent audits and a public bug bounty program to ensure the security of smart contracts. **Be aware that smart contracts deployed on a blockchain aren't resistant to external vulnerability, or a hack. Be aware that active smart contract owner privileges constitute an elevated impact on smart contract safety and security. Therefore, InterFi does not guarantee the explicit security of the audited smart contract.**

The analysis of the security is purely based on the smart contracts alone. No applications or operations were reviewed for security. No product code has been reviewed.

This report should not be considered as an endorsement or disapproval of any project or team. The information provided in this report does not constitute investment advice, financial advice, trading advice, or any other sort of advice and you should not treat any of the report's content as such. Do conduct your due diligence and consult your financial advisor before making any investment decisions.

About InterFi Network

InterFi Network provides intelligent blockchain solutions. InterFi is developing an ecosystem that is seamless and responsive. Some of our services: Blockchain Security, Token Launchpad, NFT Marketplace, etc. **InterFi's mission is to interconnect multiple services like Blockchain Security, DeFi, Gaming, and Marketplace under one ecosystem that is seamless, multi-chain compatible, scalable, secure, fast, responsive, and easy to use.**

InterFi is built by a decentralized team of UI experts, contributors, engineers, and enthusiasts from all over the world. Our team currently consists of 6+ core team members, and 10+ casual contributors. **InterFi provides manual, static, and automatic smart contract analysis, to ensure that project is checked against known attacks and potential vulnerabilities.**
