

# SMART CONTRACT SECURITY AUDIT SaveX Coin

AUDITED ON SEPTEMBER 02, 2021

**USING INTERFI AUDITING ARCHITECTURE** 

# **Summary**

### **Audit:**

Auditing Firm InterFi Network

**Architecture** InterFi Auditing Architecture

Smart Contract Audit Approved By Chris | Blockchain Specialist at InterFi

Project Overview Approved BY Albert | Project Specialist at InterFi

Platform Solidity / BSC

Audit Check (Mandatory)

Vulnerability Check, Source Code Review, Functional

Test

Website Review, Socials Review, Token Review (Not

Applicable)

Consultation Request Date August 30, 2021

Report Date August 02, 2021

# **Risk profile:**

InterFi team has performed a line-by-line manual analysis and automated review of the smart contract. The smart contract was analyzed mainly for common smart contract vulnerabilities, exploits, and manipulation hacks. According to the smart contract audit, **SaveX Coin's smart contract source code has Low Risk Severity.** 

For the detailed understanding of risk severity, source code vulnerability, and functional test, kindly refer to the audit.

# **Project overview**

InterFi was consulted by SaveX Coin on August 30, 2021 to conduct a smart contract security audit of their solidity source code.

### **Public information**

SaveX Coin is built on the foundation of community involvement that are the untamed wilderness of our future. As we move further away from rigid financial structures and traditional mindsets, we become free to discover new ways to solve problems and relate to one another. A part of the transaction fee is automatically redistributed back to all SaveX holders, so for as long as the user hold SaveX and there is market activity, user will continue to earn.

Information	SaveX Coin
Blockchain	Binance Smart Chain

# Audit scope and methodology

The scope of this report is to audit the smart contract source code of SaveX Coin. The source code can be viewed in its entirety on

https://bscscan.com/address/0xe327lc7efab652302eba90e2bf5462278856b79c#code#L1

InterFi has scanned the contract and reviewed the project for common vulnerabilities, exploits, hacks, and back-doors. Below is the list of commonly known smart contract vulnerabilities, exploits, and hacks:

### **Category**

	Re-entrancy (RE)
	Unhandled Exceptions (UE)
Smart Contract Vulnerabilities	Transaction Order Dependency (TO)
	Integer Overflow (IO)
	<ul> <li>Unrestricted Action (UA)</li> </ul>
	<ul> <li>Ownership Takeover</li> </ul>
	Gas Limit and Loops
	<ul> <li>Deployment Consistency</li> </ul>
Source Code Review	<ul> <li>Repository Consistency</li> </ul>
	Data Consistency
	<ul> <li>Code Typo Error</li> </ul>
	Token Supply Manipulation
	Access Control and Authorization
	Operations Trail and Event Generation
Functional Assessment	Assets Manipulation
	Liquidity Access

### InterFi methodology

The aim of this report is to analyze the smart contract and identify the vulnerabilities and the hacks in the smart contract. Mentioned are the steps used by InterFi to assess the smart contract:

- 1. Code review that includes the following
  - Review of the specifications, sources, and instructions provided to InterFi to make sure we understand the size, scope, and functionality of the smart contract.
  - Manual review of code, which is the process of reading source code line-byline to identify potential vulnerabilities.
- 2. Testing and automated analysis that includes the following
  - Test coverage analysis, which is the process of determining whether the test cases are covering the code and how much code is exercised when we run those test cases.
  - Symbolic execution, which is analysing a program to determine what inputs causes each part of a program to execute.
- Best practices review, which is a review of the smart contracts to improve efficiency, effectiveness, clarify, maintainability, security, and control based on the established industry and academic practices, recommendations, and research.
- Specific, itemized, actionable recommendations to help you take steps to secure your smart contracts

### Automated 3P frameworks used to assess the vulnerabilities

- ❖ Slither
- MythX
- Uniswap V2
- Open Zeppelin
- Solidity Code Complier

# General risk factors

Smart contracts are generally designed to manipulate and hold funds denominated in Ether. This makes them very tempting attack targets, as a successful attack may allow the attacker to directly steal funds from the contract. Below are the typical risk levels of a smart contract:

**Vulnerable**: A contract is vulnerable if it has been flagged by a static analysis tool as such. As we will see later, this means that some contracts may be vulnerable because of a false-positive.

**Exploitable:** A contract is exploitable if it is vulnerable and the vulnerability could be exploited by an external attacker. For example, if the "vulnerability" flagged by a tool is in a function which requires to own the contract, it would be vulnerable but not exploitable.

**Exploited:** A contract is exploited if it received a transaction on Ethereum's main network which triggered one of its vulnerabilities. Therefore, a contract can be vulnerable or even exploitable without having been exploited.

Risk	
severity	Meaning
! Critical	This level vulnerabilities could be exploited easily, and can lead to asset loss, data
	loss, asset manipulation, or data manipulation. They should be fixed right away.
! High	This level vulnerabilities are hard to exploit but very important to fix, they carry an
	elevated risk of smart contract manipulation, which can lead to critical risk severity
! Medium	This level vulnerabilities are should be fixed, as they carry an inherent risk of future
	exploits, and hacks which may or may not impact the smart contract execution.
	This level vulnerabilities can be ignored. They are code style violations, and
	informational statements in the code. They may not affect the smart contract
	execution

# **Audit overview**

# Functions used in the smart contract

Query	Result
_liquidityFee	0
_maxTxAmount	100000000000000000000000000000000000000
deadAddress	0x000000000000000000000000000000000000
_taxFee	0
allowance	True
balanceOf	True
decimals	9
getUnlockTime	0
isExcludedFromFee	True
isExcludedFromReward	hruein Security

# **Verifying token functions**

Function	Description	Tested	Verdict
Tobal Consult	provides information about the total token	Yes	Passed
TotalSupply	supply		
BalanceOf	provides account balance of the owner's	Yes	Passed
Balanceon	account		
Transfer	executes transfers of a specified number of	Yes	Passed
	tokens to a specified address		
TransferFrom	executes transfers of a specified number of	Yes	Passed
	tokens from a specified address		
Approve	allow a spender to withdraw a set number of	Yes	Passed
	tokens from a specified account		
Allowance	returns a set number of tokens from a spender	Yes	Passed
Allowarice	to the owner		

# **Verified**

- Owner can not mint new tokens
- Owner can not burn/lock users' assets
- Owner can not pause the contract

### **Note**

- ❖ Active Owner: 0x9cff1fc2e28128ae23e53ab294f50d751b896d61
- Owner can change transaction tax, allowances, etc.

### **Points To Note**

- 1. The smart contract utilizes the SafeMath to prevent Integer Overflow.
- The source code has some medium-risk severity issues. No major impactful event identified.
- 3. The source code has a low-risk severity. No major impactful event identified.

**Blockchain Security** 

**Vulnerability** Status

Compiler errors	! Medium
Re-entrancy. Race conditions and cross function race conditions (RE)	Passed
Possible delays in data delivery	Passed
Gas optimization	! Low
Integer Underflow and overflow	Passed
Oracle Calls	Passed
Call stack depth attack	Passed
Parity Multisig Bug	Passed
Tx ordering dependency (TO)	Passed
DOS with revert and block gas limit	Passed
Private user data leaks	Passed
Malicious event log Blockchain Security	Passed
Safe open zeppelin contract implementation and usage	Passed
The impact of exchange rate on the logic	Passed
Functions that are not used (dead-code)	! Low
Typographical Errors	! Low
Signature Malleability	Passed
Floating Pragma	Passed
Scoping and declarations	Passed

### **Risk Severity** Status

! Critical None critical severity issues identified

! High None high severity issues identified

Medium severity issues identified

! Medium

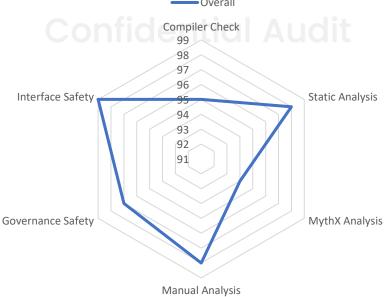

KeccakCaching, EmptyByteArrayCopy, DynamicArrayCleanup (Low Impact)

Low severity issues identified

! Low Contract used outdated solidity compiler at the time of deployment (No

Impact)

# Blockchain Security Assessment Overall

# Conclusion

InterFi team has performed a line-by-line manual analysis and automated review of the smart contract. The smart contract was analyzed mainly for common smart contract vulnerabilities, exploits, and manipulation hacks.

SaveX Coin's smart contract source code has LOW RISK SEVERITY.

SaveX Coin has PASSED the InterFi's ECHELON-1 standard smart contract audit.

### **Auditor's Footnote:**

- Be aware that active smart contract owner privileges constitute an elevated impact to smart contract's safety and security. Proceed with extra caution.
- Liquidity pair contract's security is not checked due to out of scope. Liquidity locking details NOT provided by the team.
- Project website is not checked due to out of scope. The website hasn't been reviewed for SSL and lighthouse report.
- Project team, and the project's social channels are not checked due to out of scope.

# **Important Disclaimer**

InterFi Network provides contract auditing and project verification services for blockchain projects. The purpose of the audit is to analyse the on-chain smart contract source code, and to provide basic overview of the project. This report should not be transmitted, disclosed, referred to, or relied upon by any person for any purposes without InterFi's prior written consent.

InterFi provides the easy-to-understand assessment of the project, and the smart contract (otherwise known as the source code). The audit makes no statements or warranties on the security of the code. It also cannot be considered as an enough assessment regarding the utility and safety of the code, bug-free status, or any other statements of the contract. While we have used all the data at our disposal to provide the transparent analysis, it is important to note that you should not rely on this report only — we recommend proceeding with several independent audits and a public bug bounty program to ensure the security of smart contracts. Be aware that smart contracts deployed on a blockchain aren't resistant from external vulnerability, or a hack. Be aware that active smart contract owner privileges constitute an elevated impact to smart contract's safety and security. Therefore, InterFi does not guarantee the explicit security of the audited smart contract.

The analysis of the security is purely based on the smart contracts alone. No applications or operations were reviewed for security. No product code has been reviewed.

This report should not be considered as an endorsement or disapproval of any project or team.

The information provided on this report does not constitute investment advice, financial advice, trading advice, or any other sort of advice and you should not treat any of the report's content as such. Do conduct your own due diligence and consult your financial advisor before making any investment decisions.

# **About InterFi Network**

InterFi Network provides intelligent blockchain solutions. InterFi is developing an ecosystem that is seamless and responsive. Some of our services: Blockchain Security, Token Launchpad, NFT Marketplace, etc. InterFi's mission is to interconnect multiple services like Blockchain Security, DeFi, Gaming, and Marketplace under one ecosystem that is seamless, multi-chain compatible, scalable, secure, fast, responsive, and easy-to-use.

InterFi is built by a decentralized team of UI experts, contributors, engineers, and enthusiasts from all over the world. Our team currently consists of 6+ core team members, and 10+ casual contributors. InterFi provides manual, static, and automatic smart contract analysis, to ensure that project is checked against known attacks and potential vulnerabilities.
